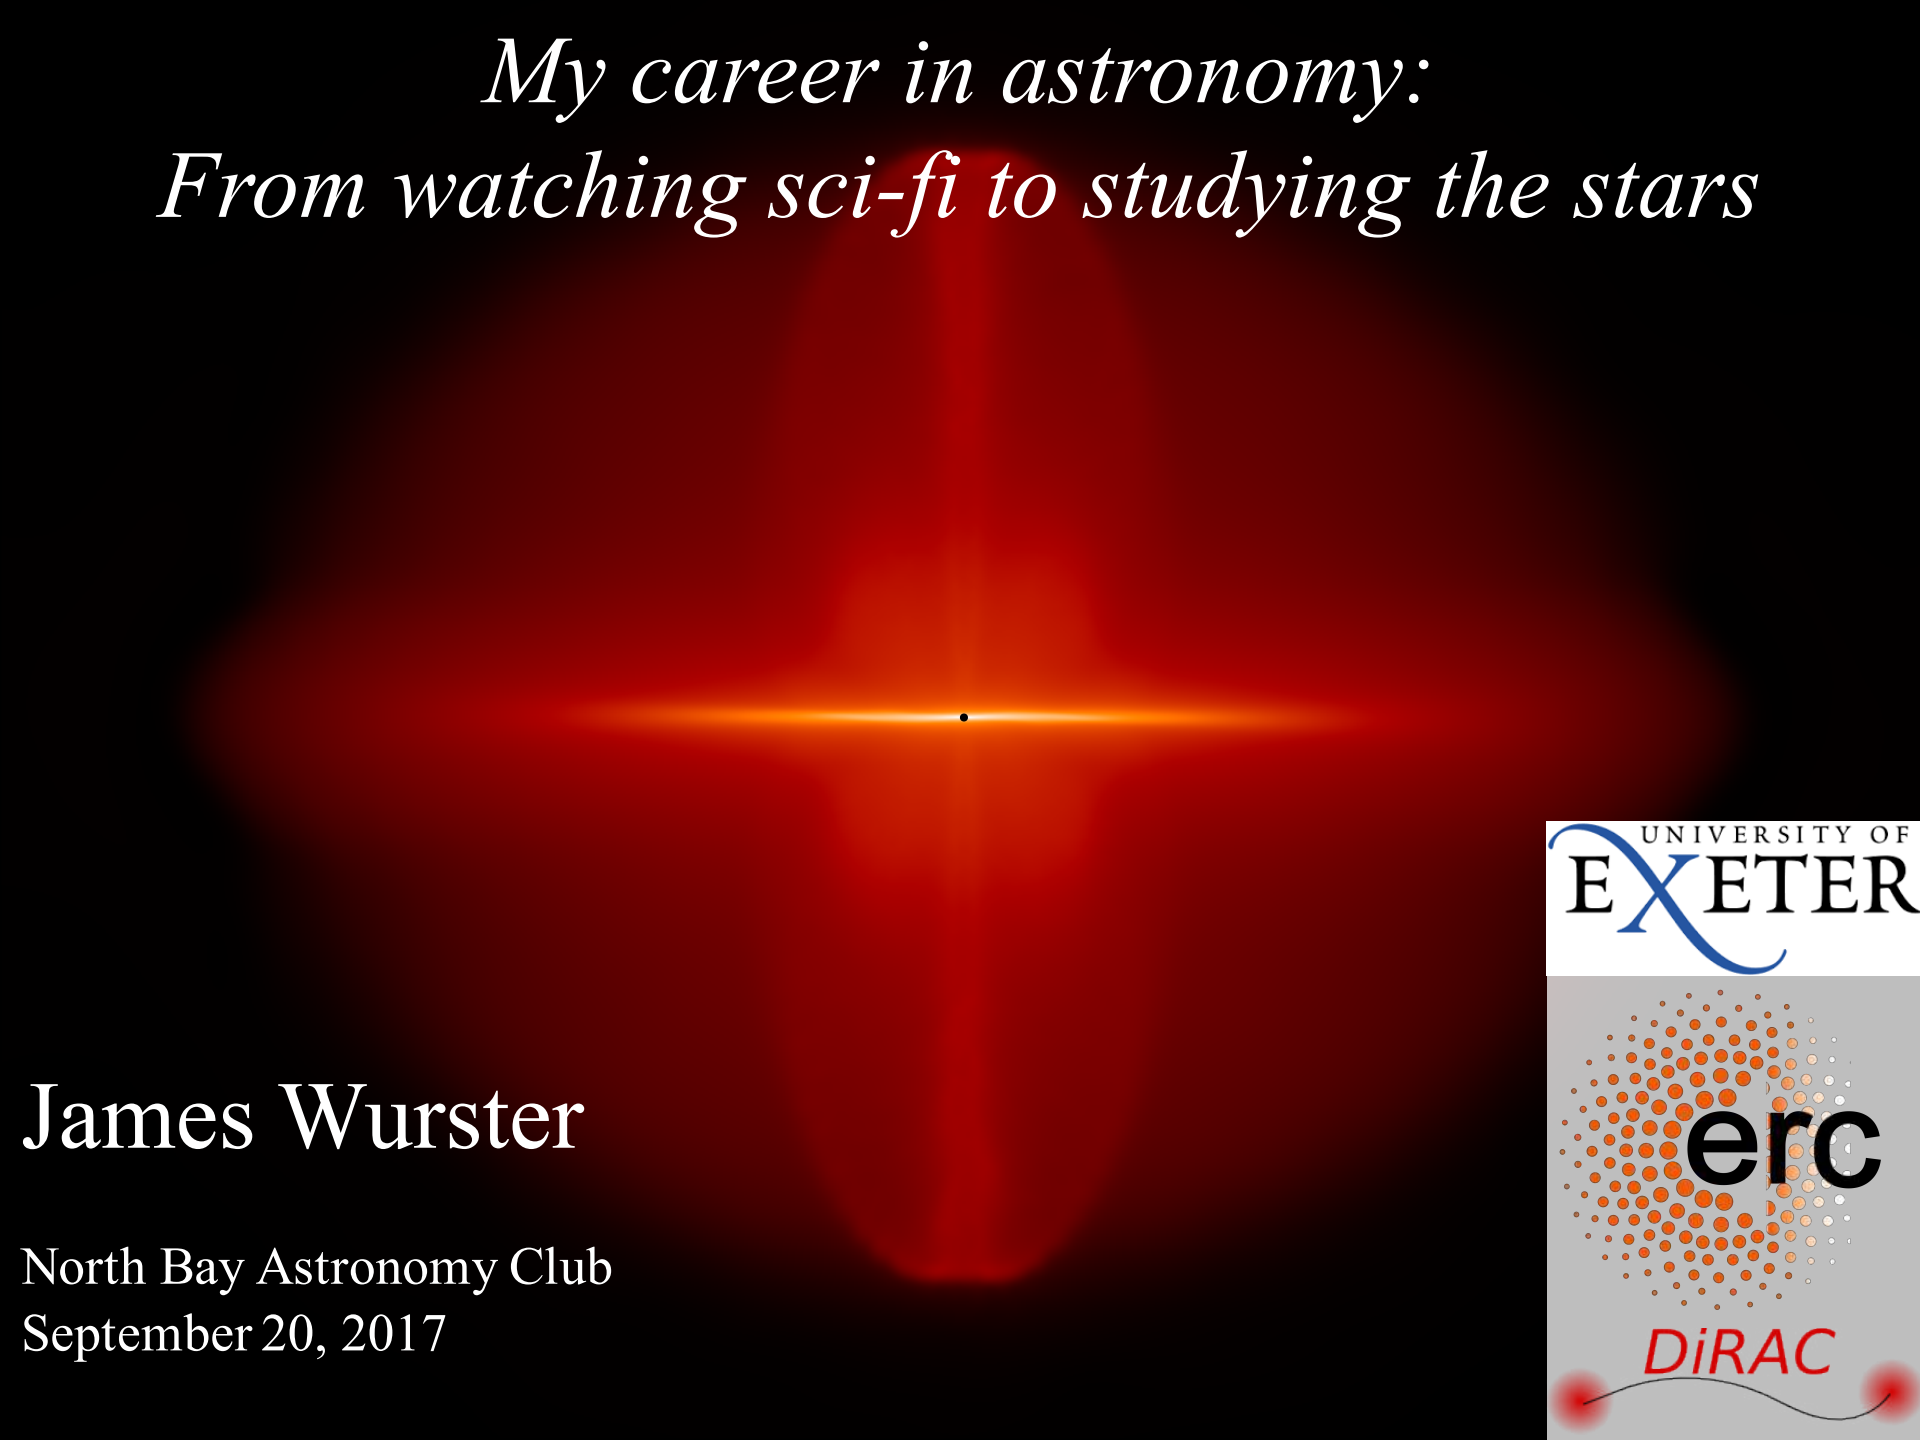
My career in astronomy: From watching sci-fi to studying the stars



James Wurster

North Bay Astronomy Club
September 20, 2017

UNIVERSITY OF EXETER

erc

DiRAC

How did I get interested in Astronomy

Education: What is required for a PhD?

- Undergraduate
  - Math, physics and astronomy
  - Mostly course-work
  - (Paid) summer research options
  - 4 years

- Graduate school
  - Masters
    - Course-work + original thesis
    - 2 years
  - PhD
    - Course-work + original thesis
    - 4 years

Education: What is after a PhD?

- Research Fellow/Post-Doc
  - 1 – 3 positions of 2 – 5 years
  - Research intensive
  - Teaching/supervising optional/recommended

- Lecturer, Professor
  - Permanent(ish) position
  - Research intensive
  - Teaching intensive
  - Administration intensive

Link to amateur clubs

- University astronomy departments often collaborate with the local amateur astronomy clubs
  - Academics speak at amateur meetings
  - Amateurs bring telescopes to university events and staff them

Presenting our work

- Form an idea

Presenting our work

- Form an idea 
- Perform the research  

Presenting our work

- Form an idea 
- Perform the research  
- Write the results 

Presenting our work

- Form an idea 
- Perform the research  
- Write the results 
- Submit the paper to a peer-reviewed journal 
Presenting our work

- Form an idea 
- Perform the research  
- Write the results 
- Submit the paper to a peer-reviewed journal - Paper is reviewed by an anonymous referee 

Presenting our work

- Form an idea 
- Perform the research  
- Write the results 
- Submit the paper to a peer-reviewed journal - Paper is reviewed by an anonymous referee 
- Revise paper based upon referee's recommendations/requests 

Presenting our work

- Form an idea 
- Perform the research  
- Write the results 
- Submit the paper to a peer-reviewed journal - Paper is reviewed by an anonymous referee 
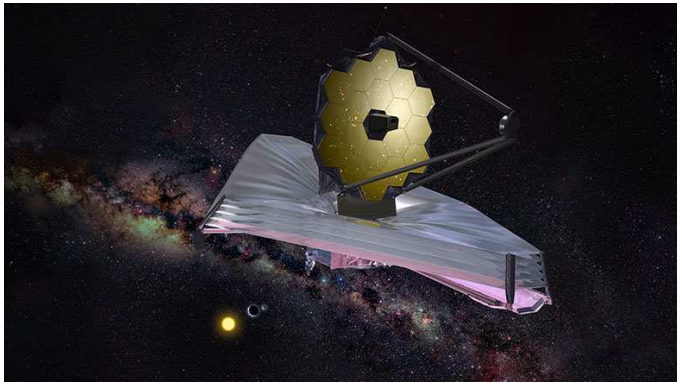
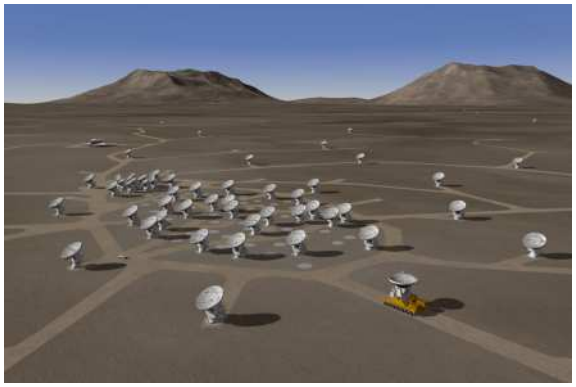
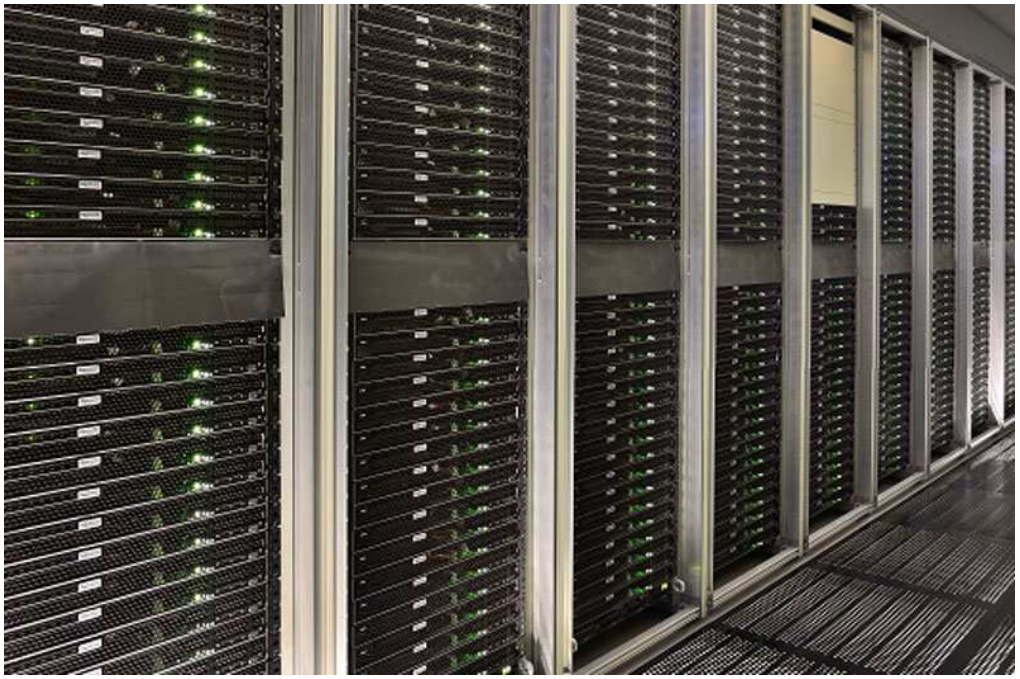
- Revise paper based upon referee's recommendations/requests 
- Paper is published! 

Observational vs Theoretical Astronomy

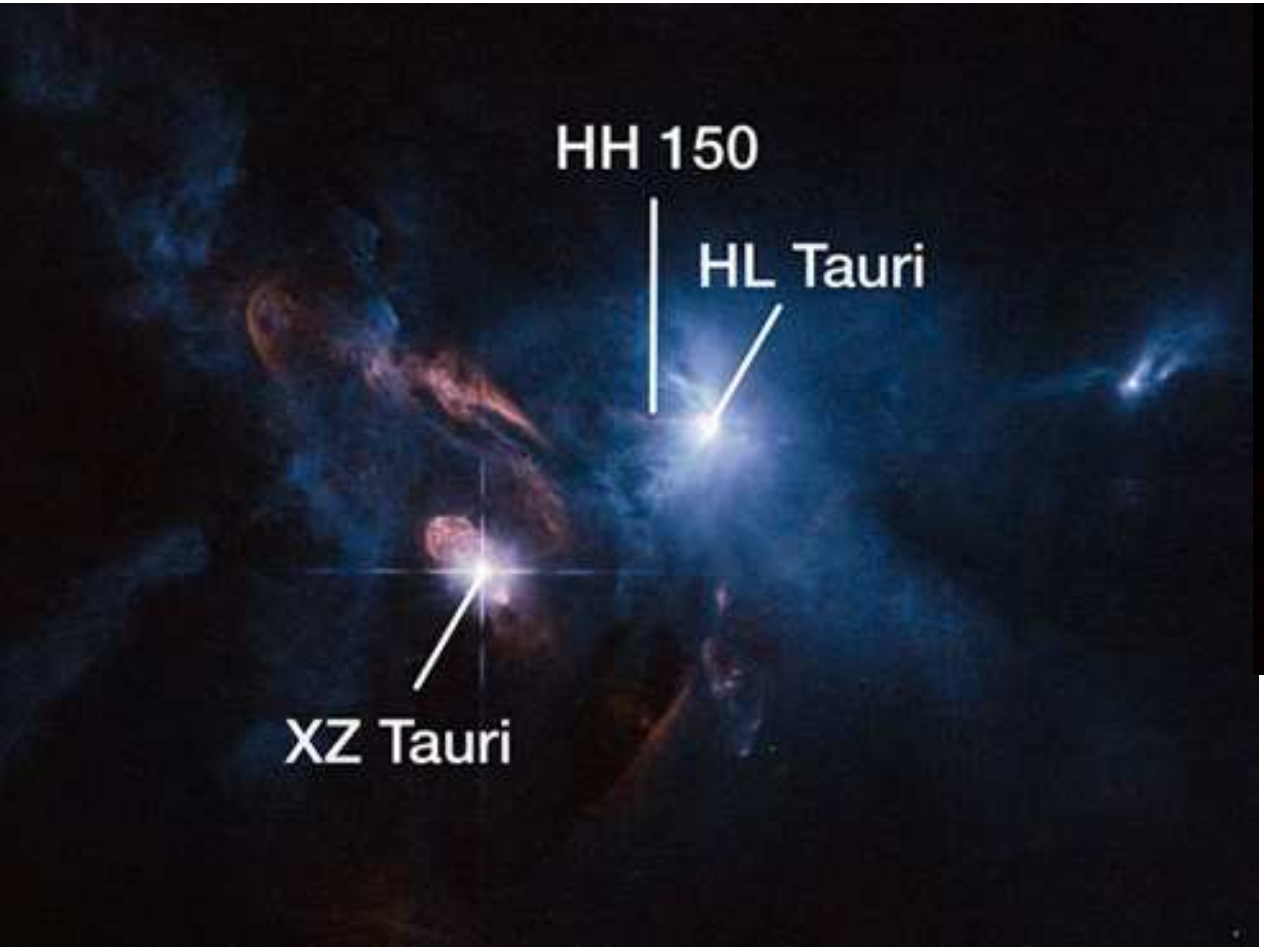




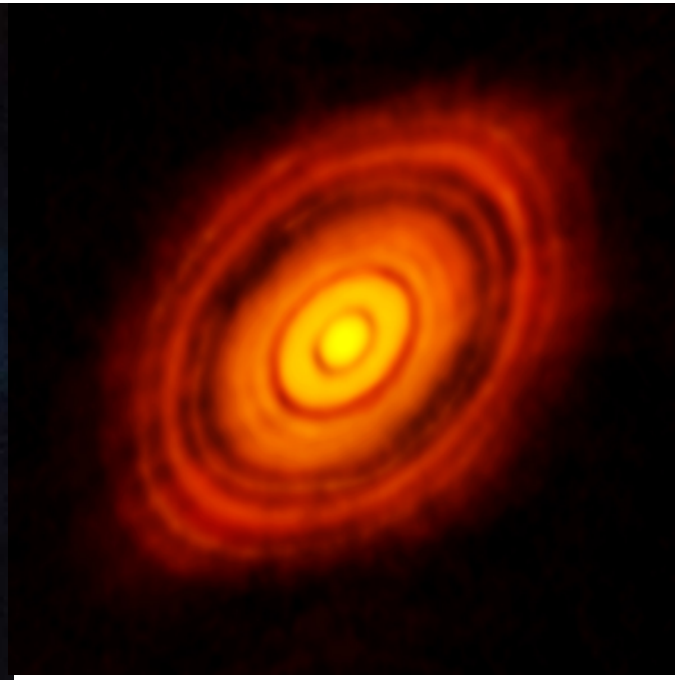


Observational vs Theoretical Astronomy

- HL Tau
  - 450 ly (120pc) from Earth in Taurus Molecular Cloud
  - Young (< 100 000 yr) system

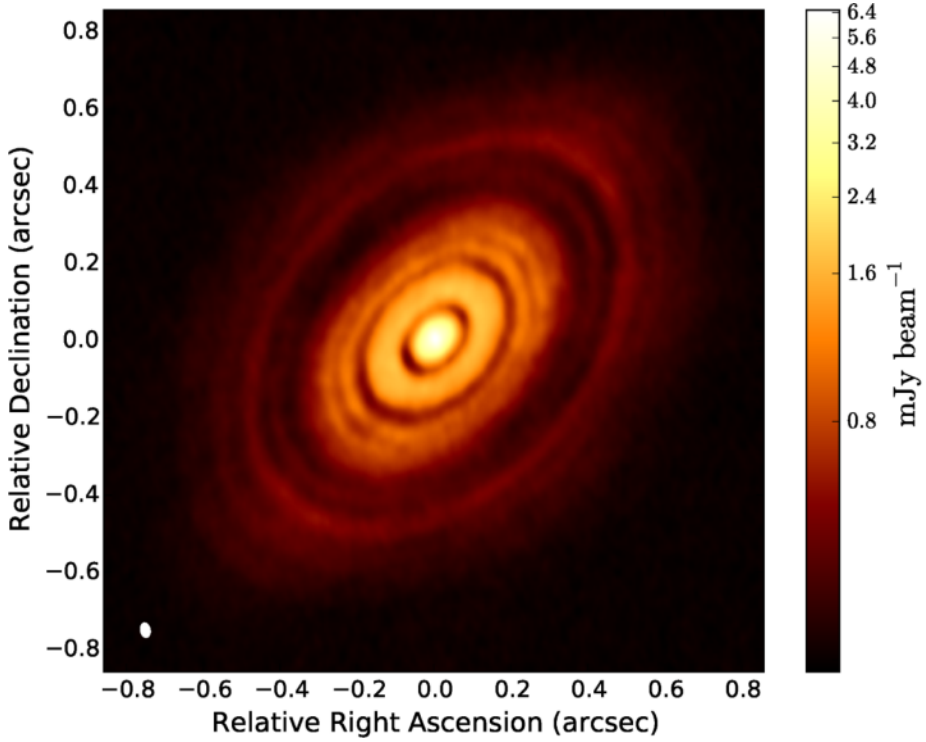


HL Tauri and surroundings (credit: NASA/HST)

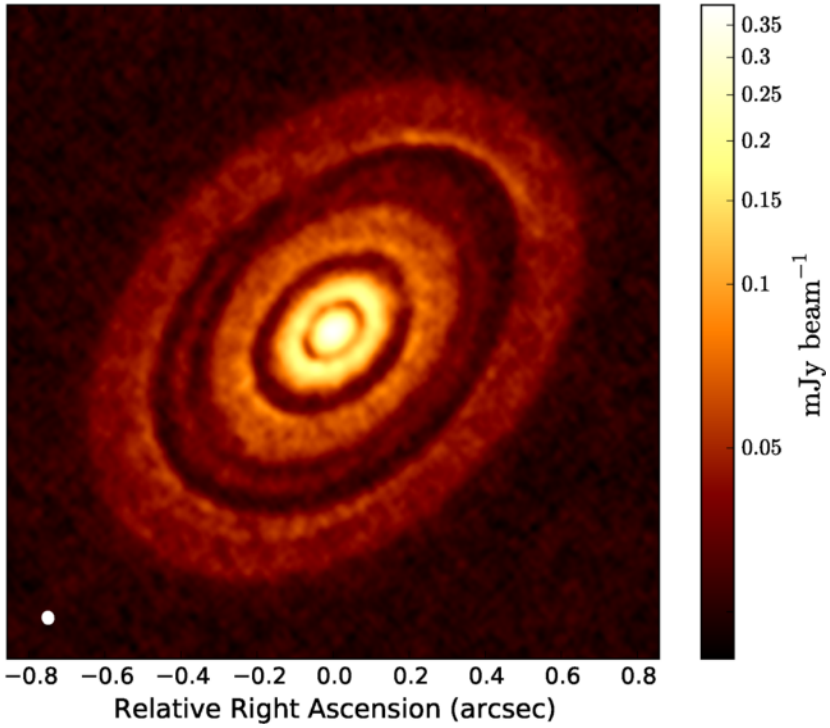


HL Tau: Dust disc (credit: ALMA)

Observational vs Theoretical Astronomy



ALMA observations



Numerical simulation

Credit: Giovanni Dipierro, Daniel Price, Guillaume Laibe, Kieran Hirsh, Alice Cerioli and Giuseppe Lodato. On planet formation in HL Tau. MNRAS 453, L73–L77 (2015)

Observational vs Theoretical Astronomy

Visualization by Frank Summers (Space Telescope Science Institute). Simulation by Chris Mihos (Case Western Reserve University) and Lars Hernquist (Harvard University).
